

Astra Zeneca HQ

- / Cambridge, Cambridgeshire.
- / New build lighting system
- / Bespoke product design
- / Seamless ceiling integration

The Brief

AstraZeneca is a British-Swedish multinational pharmaceutical and biotechnology company with a portfolio of products for major diseases. The company's headquarters is at their Cambridge Biomedical Campus. Founded in 1999, the company has since become one of the world's largest pharmaceutical companies.

It is perhaps best known for its involvement in developing the Oxford-AstraZeneca COVID-19 vaccine. AstraZeneca looked to relocate its corporate headquarters to a 60,000 sq metre campus in Cambridge. AstraZeneca aspired to create a leading science and research centre powered by an incredibly energy efficient lighting system.

The Solution

Working in association with international ceiling specialist, SAS, we devised a bespoke solution incorporating the discrete look of our [SLIMLUX](#) range. A unique ceiling grid lay-out allowed for fluid integration of up and down lighting, partitioning and the attachment of laboratory equipment. Our company provided the pharma giant with complete flexibility and the ability to seamlessly adjust these three key features throughout its new global HQ.

The Result

An unobtrusive, modern lighting solution is now installed in the ambitious Cambridge campus, illuminating its corridors and laboratories efficiently. Designed with the comfort of occupants in mind, the bespoke ceiling and lighting system will efficiently light the way forward for some of the world's eminent biomedical researchers and academics.
